

Michael Scott is a college student that lives off campus with his family

Michael has a very busy life when he is not in the classroom because he needs to make time for his fiancé, he has to work as a server to help pay the bills, and he needs to take extra time to study so that he is able to stay ahead in school.

Because Michael's home life is so busy, he does not have all day to be able to sit around in a parking lot to look for spaces before class starts.

Since Michael does not have time to look for parking he is able to use his parking assist app to see all available parking spots on campus.

Michael is now able to quickly find parking and make it to class in a timely manner and make his day more efficient.

Addisson smith was on his way to his regular 10:00 am monday class as he drove to campus for a very important class that was attendance graded.

With only 10 minutes left he drives around campus looking for a parking space to park his car before the class starts. He uses 5 out of the 10 minutes to look for a parking space because all the available parking spaces he could see are filled up

He then remembers that there is a parking app that he could use to find free parking spaces around campus. The app shows him that there is a parking space nearer to his class than where he would usually park his car .

With plenty of time to spare He finds a parking space right in front of the building of his class and he was surprised that he never knew that there was a parking space close to the building and this couldn't be done without the parking space app. For this app he is thankful

With time to settle in before the class Addison Smith is able to get into the class, settle down and attend the lecture while marking present for the class. He also enjoyed the class very well. All of this could only be thanks to the Parking Space App.

John Smith hops in car and checks the parking app for available parking around Darla Moore School of Business

John Smith drives to where he saw multiple available spots off of Assembly St near Darla

John Smith is very happy that he checked his Parking Assistant App and was able to find a close parking spot to Darla Moore in less than 2 minutes.

John Smith makes it to class early because of how quick he was able to use the Parking Assistant App

Angus wakes up late 20 minutes before his first lecture as a professor

Angus does not stress because he has the parking assistant app so he will have no problem finding parking

Angus follows where the app to find the parking spot with ease

Angus now shows up to his lecture five minutes early instead of five minutes late thanks to the app
